Știință și Tehnologie

Postdoctoral research associate in machine learning (6 open positions)

Six postdoctoral research associate positions in machine learning are available at the Romanian Institute of Science and Technology, in Cluj-Napoca, in the framework of two EU-funded projects.

We are looking for self-motivated, independent, creative scientists, with strong analytical and computational modeling skills. Candidates should have a PhD in machine learning, computational neuroscience, physics, applied mathematics, robotics, cognitive science, theoretical computer science, engineering or related fields, and a strong publication record. We welcome people with a PhD in a field other than machine learning, but with a strong publication record, who would like to switch to a machine learning career.
